

HYDRASUN TRAINING ECITB COURSES

SBT01 – Assemble and Install Small Bore Tubing with Twin Ferrule Mechanical Grip Fittings Course

The Engineering Construction Industry Training Board (ECITB), in collaboration with Step Change in Safety introduced the SBT model in 2012. The four approved training courses are derived from the ECITB Small Bore Tubing Training Standards with work based task assignments and ECITB Technical Competence Validation Tests. These training standards and competence tests cover - isolations, dismantling techniques, inspection of components, shape components, replace components, install and pressure testing of small bore tubing assemblies.

This SBT01 course is aimed at personnel who will be working with Twin ferrule connections. The course is constructed on a modular format, with delegate activities during each module, completed with a knowledge test and an assessment activity, utilising the learning outcomes from each individual module.

DURATION

- 2 Day

PRE-REQUISITE

- No previous small bore tubing training required.

COURSE DETAILS

- SBT Systems Overview
- Tubing
- Tube Fitting
- Tools and Installation
- Piping & Instrumentation Diagrams
- Tube Bending
- Pipe Connections
- Safety at work with Twin Ferrule Connections
- Assessment
- Moving towards Stage 3

CERTIFICATION

- ECITB Certification of Course Completion – Valid for 12 Months

COST

- Price on application – Maximum 5 delegates per course
